

CES-27 Distributed Processing

1th Activity

Prof Hirata and Prof Juliana
Carlos Matheus Barros da Silva

August 2019

Task 1

It was implemented a Lamport's *Scalar Logic Clock* simulation. The implementation was made in Go and it can be seen on the Repository¹.

Suggested Test Case

As It was suggested, it was conducted a test with 3 terminal windows, on each one was opened one task of the program as shown in the Code 1.

The test was made according to the model represented on Figure 1. The results can be seen on the outputs on the

Figure 1: Model representing the execution of Task 1 example test case

```
Terminal 1: go run Process.go 1 :10004 :10003 :10002
Terminal 2: go run Process.go 2 :10004 :10003 :10002
Terminal 3: go run Process.go 3 :10004 :10003 :10002
```

Code 1: Code that was run on each of the 3 terminal window on the execution of Task 1 example test case

Built Test Case

Research

- Explore the *Stem Torproject*[1] website.
- Do *Stem Torproject* tutorials.
- Look for other sources about Tor Python libraries, including *Youtube* tutorials.

¹<https://github.com/CarlosMatheus/CES-27/tree/master/lab01>

```
carlosmatheus@carlosmatheus-ThinkPad: ~/Documents/CES-27-Labs/Lab01/task01$ go run Process.go 1 :10004 :10003 :10002
1
Destiny Id: 1
Current logical clock: 1
1
Destiny Id: 1
Current logical clock: 2
2
Destiny Id: 2
```

Figure 2: Window 1 after execution of Task 1 example test case

Implementation

Have a Python application that includes at least the following items:

- Establish Tor internet connection with Python.
- Fetch websites with Tor connection.
- Create message system between two points with Tor connection.

Tor Android App

This section is extra to this project. Once the first part related to the Python application is done, the focus will be to try to make the same kind of application to run on an Android.

Research

- Study *OrbotHelper* class in *Stem Torproject*[1].

Implementation

- Adapt the Python application to work on Android.

Initial Schedule

- March: Study on Python Tor Libraries.
- April: Develop Python app.
- May: Study Android Tor app Library. Start Tor app implementation.
- June: Finish Tor app implementation. Write the report. Make the project presentation.

A terminal window with a dark background and light text. The window title bar shows three colored circles (red, yellow, green) and the text "Default". The terminal content shows a user prompt "carlosmatheus@carlosmatheus-ThinkPad: ~/Documents/CES-27-Labs/Lab01/task01\$" followed by the command "go run Process.go 2 :10004 :10003 :10002". The output of the program is displayed line by line: "Current logical clock: 3", "2", "Destiny Id: 2", "Current logical clock: 4", "3", and "Destiny Id: 3". A cursor is visible at the end of the last line of output.

```
carlosmatheus@carlosmatheus-ThinkPad: ~/Documents/CES-27-Labs/Lab01/task01$ go run Process.go 2 :10004 :10003 :10002
Current logical clock: 3
2
Destiny Id: 2
Current logical clock: 4
3
Destiny Id: 3
```
